Parallel Jaws: The parallel jaws of the PROXIMATE LS instrument compress and contain the tissue. The possibility of tissue extrusion from the instrument's jaws is minimized. Visibility is also enhanced.

Remote Pin Placement: Precise pin placement is achieved by the use of a remote side lever. Accurate pin placement and containment of the tissue lead to precise closure of the parallel jaws. Pin placement is achieved easily and under full visibility.

Two Staple Heads: The PROXIMATE LS instrument has two staple heads. Unlike other staplers, neither staple cartridge or coded cartridges for different thicknesses, the PROXIMATE LS Stapler has staples equivalent to the standard Ethicon 3.5mm and 4.8mm staples. By simply adjusting the gap setting, the user can adjust the gap with the stapler.

Replacing the normal two cartridge system with PROXIMATE Linear Stapler enables the change to be made at the operating table, reducing operation time and providing the opportunity for significant inventory savings.

The New linear stapler with all the advantages.

We believe that the new PROXIMATE LS instrument has more to offer you than any other Linear Stapler. Why not give us a chance to show you?

PROXIMATE
LINEAR STAPLER
