

## "This book is a beauty!

I found it interesting and it answered many questions I had on the respiratory consequences of AIDS—plus many I wouldn't have even thought of. This book has great value for all practitioners (from medical students to specialists) who deal with AIDS and the lung."

The Medical Journal of Australia

In AIDS and the lung experts review the problems, emphasising practical points and providing up to date information on this rapidly changing subject. Edited by David Mitchell, consultant physician in respiratory medicine, St Mary's Hospital, London, and Ashley Woodcock, consultant chest physician, Wythenshawe Hospital, Manchester, AIDS and the lung is an indispensable handbook for respiratory physicians, especially those with limited experience of dealing with AIDS—and for everyone concerned with protective measures in bronchoscopy units and pulmonary function laboratories.

## Comprehensive information about assisted ventilation

Many doctors, including those in training, care for patients in the intensive care unit. Too often such doctors do not know the details of ventilation techniques; yet if they are to feel at home on the intensive care unit they must be familiar with all aspects of assisted ventilation.

In this short comprehensive guide to the subject thoracic physicians, intensive care specialists, and anaesthetists take the reader through from the theory, equipment, and techniques to the latest advances in non-invasive and domiciliary ventilation.

Edited by John Moxham, professor of thoracic medicine at King's College School of Medicine and Dentistry, London, Assisted Ventilation gives essential information for all concerned in managing patients on ventilators.
