BRITISH MEDICAL ASSOCIATION, TAVISTOCK SQUARE, LONDON, WC1H 9JR

**WARNING NOTICE**

Owing to a postal delay the following warning by the authors could not be included in the article entitled 'Radiological evaluation of post-tracheostomy lesions' by A. S. Macmillan, A. Everette James, Jr., F. P. Stitik, and H. C. Grillo which appeared on p. 696 of the November 1971 issue of this journal:

'Tantalum is an experimental contrast agent not yet approved by the F.D.A. for clinical use and should not be used without their approval.'

The authors strongly recommend that tantalum in its current form should not be employed in widespread clinical use.—Editors, *Thorax*.
