

**“Cryoanalgesia\* appears to be the method of choice for the control of pain following thoracotomy, offering advantages not achieved by any other technique”<sup>1</sup>**

This was the conclusion of a recent paper on the role of Cryoanalgesia in the relief of pain after thoracotomy. The advantages in question?

- Excellent control of postoperative pain bringing significant reduction in narcotic and oral analgesia.
- Improved patient compliance with rigorous physiotherapy.
- Reduced incidence of postoperative complication.
- Nursing care eased.

- Technique is simple with no undesirable sequelae. In line with almost every major advancement in cryotherapy, specialised equipment was designed for this technique by Spembly—a British Company—and world leader in the manufacture of products for Cryosurgery and Cryoanalgesia. For clinical information and details of the Spembly unit involved, simply fill in the coupon below.

Historically, spirometers have tended to be cumbersome, and difficult to operate. Now there is an alternative. The VS400 Volumetric Spirometer is a modern light-weight, compact instrument for easy transport throughout the hospital. It features a unique permanent file-size patient record complete with test data. The three colour pen system produces easy-to-read volume vs. time tracings for multiple breath efforts and pre and post medication analysis. Below the tracings, on the test record, is a simple step-by-step format to guide technicians through the data calculation procedure. Before you buy compare...

- Accurate, waterless positive displacement technique
- Unique file-size patient record
- Simplicity of operation
- Compact and lightweight design
- Ease of maintenance
- Compliance with all spirometric standards (ATS, ACCP, NIOSH, NHLBI)
- Ability to upgrade to automated micro-processor (Model 800)
