

PROGRESS

In The Management Of Cystic Fibrosis

creon[®] 
pancreatin

RIGHT ON TARGET – RIGHT FROM THE START

Prescribing Information – Presentation: Brown-yellow capsules containing enteric coated granules of pancreatin equivalent to: 9,000 BP units of amylase, 8,000 BP units of lipase, 210 BP units of protease. Available in packs of 100. Basic NHS price £13.33. **Indication:** Pancreatic exocrine insufficiency. **Dosage and administration:** Adults and children: Initially one or two capsules with meals, then adjust according to response. The capsules can be swallowed whole, or for ease of administration they may be opened and the granules taken with fluid or soft food, but without chewing. If the granules are mixed with food, it is important that they are taken immediately, otherwise dissolution of the enteric coating may result. **Contra-indications,**

Warnings, etc: Contra-indications: Substitution with pancreatic enzymes is contra-indicated in the early stages of acute pancreatitis. Warnings: Use in pregnancy: There is inadequate evidence of safety in use during pregnancy. The product is of porcine origin. Rarely cases of hyper-uricosuria and hyper-uricaemia have been reported with high doses of pancreatin. Overdosage could precipitate meconium ileus equivalent. Perianal irritation could occur, and, rarely, inflammation when large doses are used. **Product Licence Number:** 5727/0001. **Name and address of Licence Holder:** Kali Chemie Pharma GmbH, Postfach 220, D-3000, Hannover 1, West Germany.

At last. The salbutamol inhaler for asthma patients of all ages.

It's breath-actuated

and it's salbutamol

There's no
re-loading

It's so simple ...

even I
can
use it

Prescribing Information. Presentation: a breath-actuated pressurised inhalation aerosol delivering Salbutamol Sulphate BP equivalent to salbutamol 100mcg. **Indications:** for the treatment of reversible airways obstruction associated with asthma, bronchitis and emphysema. **Dosage:** Adults of all ages: one or two inhalations as a single dose for acute symptomatic relief. For chronic maintenance/prophylactic therapy, two inhalations three or four times daily. Children, half of adult dose, increasing as necessary to the full adult dose. **Contra-indications:** administer cautiously to patients with thyrotoxicosis. Patients should be

ALWAYS

I suppose I am chiefly associated with three contributions: the first comprehensive study of the respiratory muscles; the controlled oxygen method for treating respiratory failure; and a popular but inadequate theory of the mechanism of the sensation of breathlessness.

ON

"I was not brought up to speculate wildly on the basis of very few experimental facts obtained with equipment of questionable accuracy."
"Then you've come to the wrong place. I've spent my life doing just that."

THE

The sink in the kitchen was a large shallow stoneware trough with one cold tap. Dishes were only removed as needed. Mrs Mac's technique was to slosh some boiling water into an enamel bowl, pass the requisite number of plates rapidly through it, and then wipe them with the apron she always wore.

LEVEL

We received several bits of furniture and other gifts in the wills of people who had not been able to pay their bills. These gifts did not please Pa. "I know they can't pay their bills but money shouldn't enter into medicine." Naive but admirable.

The third in the Memoir Club series of books of general interest by medical writers is *Not Always on the Level* by E J Moran Campbell, professor of medicine at McMaster University, Canada, who combines reminiscences of his Yorkshire childhood and student days in London with an account of his work in respiratory physiology and a painfully honest description of what it is like to be a manic depressive.
