

# Vitalograph – Working Towards a Caring Future

At Vitalograph, our commitment to applying innovative solutions to caring applications is total. Take the new Aerosol Inhalation Monitor. A creative product that uses proven technology to train patients in the use of metered dose inhalers. A product that's typical of Vitalograph, famous for the development and continued improvement of cost effective spirometers.

Our spirometers range from the 'feature rich' British Design Award winning Compact to the basic volumetric model, all of which meet exacting International Standards.

# WRIGHT VENTILOMETER VM-1

**NEW** - the latest addition to the WRIGHT family of respiratory instruments.

THE WRIGHT VM-1 features:

- Peak Expiratory Flow (PEF)
- Forced Vital Capacity (FVC)
- Forced Expiratory Volume in first second (FEV<sub>1</sub>)
- FEV<sub>1</sub>/FVC Computation

The VM-1 is manufactured to the same high quality that produced the award-winning mini-WRIGHT on which it is based.

- Accurate
- Reliable
- Easy to use
- Battery operated
- Portable

A printer socket is provided.

**AIRMED**

Many medical journals, including the *British Medical Journal*, now expect scientific papers submitted to them to contain confidence intervals when appropriate. Why? what are they? and how do you calculate them? *Statistics with Confidence* tells you. A clear explanation of the reasons for using confidence intervals is followed by detailed presentation of methods of calculation, including numerous worked examples and specially compiled tables. To make things even easier, a computer programme, Confidence Interval Analysis (CIA), for calculating confidence intervals, has been specially designed by Martin Gardner and details are available from the Publishing Department, *British Medical Journal*.

**Eighth edition**  
The statistical testing of data is indispensable in many types of medical investigation and a help on countless occasions in clinical practice. This book provides step by step instruction. Subjects covered include standard deviation,  $\chi^2$  tests, t tests, non-parametric tests, and correlation. The book includes sections on Fisher's exact probability test and rank correlation not published in the original *BMJ* series. Methods specially adapted to pocket calculators.

Price: Inland £3.00;  
Abroad £4.50  
BMA members: Inland £2.50;  
Abroad: £4.00

"He uses statistics as a drunken man uses lamp-posts — for support rather than illumination."  
Let the *BMJ* throw light on your methods and help your results stand up.  
— Andrew Lang

#### Fourth impression

No doctor can afford to ignore statistics: most modern medical research uses statistics. This important and authoritative book provides clear information on designing studies, applying statistical techniques, and interpreting studies that use statistics. It can be easily understood by those with no statistical training and should be read by all those who want to keep abreast of new developments.

Price: Inland £8.95;  
Abroad £11.00  
BMA members: Inland £7.45;  
Abroad: £10.00

**Second edition**  
Epidemiology has its own techniques of data collection and interpretation and its necessary jargon of technical terms, and in *Epidemiology for the Uninitiated* Professors Geoffrey Rose and David Barker guide the novice expertly through the theory and practical pitfalls. The second edition of this popular *BMJ* handbook has been revised to include further details of epidemiological methods and some of their more dramatic applications, such as the investigations on the Spanish cooking oil epidemic, and AIDS.

Price: Inland £3.95;  
Abroad £5.50  
BMA members: Inland £3.45;  
Abroad: £5.00
