Correction

Text within the figure legend has been corrected.

Figure 1  Odds ratios of Chronic Mucus Hypersecretion (CMH) across adult life according to concurrent smoking and history of lower respiratory tract infection between ages 0 and 2 years (relative to CMH presence at age 20 years in the baseline group of non-smokers without early-life lower respiratory tract infection).

EL-LRTI+ve, Early-Life Respiratory Tract infection(s) present; EL-LRTI−ve, No Early-Life Respiratory Tract infection(s).
