Cough Sedation
permits
QUIET,
UNINTERRUPTED
SLEEP**

In the treatment of unproductive cough in children and adults the advantages of ETHNINE lie in its effectiveness with low toxicity, and its freedom from side-effects such as constipation and digestive upset.

For children, ETHNINE is indicated whenever a cough sedative is considered advisable particularly in the treatment of whooping cough, irritation of the upper respiratory tract, and the cough associated with enlarged tonsils and adenoids before surgical measures are taken.

The sedative action of ETHNINE is particularly useful when it is desired to ensure a restful night's sleep uninterrupted by paroxysms of coughing.

Automatic Exposure Control by Ionisation Current

The Iontomat measures the total dose which impinges on the X-ray film and terminates the exposure as soon as the dose for obtaining the optimum contrast is registered.

Completely automatic radiography makes it impossible to get an incorrect exposure; saving in time and money is considerable.

The Iontomat is particularly useful for taking large-size chest pictures as shown in the illustration.

Streptaquaine
brand

SOLUTION OF STREPTOMYCIN SULPHATE

'STREPTAQUAINE' SOLUTION presents streptomycin sulphate in a ready-prepared stabilised aqueous solution, intended for intramuscular injection without further dilution. The clinical applications of 'Streptaquaine' Solution are, of course, those of streptomycin sulphate but it is believed that practitioners will appreciate the added convenience of this refinement, particularly as it is offered at no extra cost.

DIMYCIN Essential Facts

Mixture of equal parts of streptomycin and dihydrostreptomycin, enabling dosage of each component to be half that usually employed.

Description

For all practical purposes streptomycin and dihydrostreptomycin have the same therapeutic activity. With prolonged dosage of either drug neurotoxic effects have occasionally been observed—their incidence depending largely on size of dosage and total amount given. Using a half dose of each antibiotic the full therapeutic effect can be obtained while any risk of neurotoxic effects is reduced.

Pharmacology

All forms of tuberculosis except tuberculous meningitis treated by intrathecal injection. Non-tuberculous infections not amenable to penicillin treatment.

Indications

Vials: 1 gram and 5 grams

Packs

Good point this

CRYSTAMYCIN Essential Facts

Description

"Broad spectrum" antibiotic preparation containing sodium penicillin, streptomycin sulphate and dihydrostreptomycin sulphate.

Range of Activity

Provides combined antibacterial activity of penicillin and streptomycin; highly effective against gram-positive and gram-negative organisms.

Indications

Mixed infections, e.g. infections of urinary tract, peritonitis, infected wounds either surgical or accidental; infections of the respiratory tract.

Side Effects

By combining streptomycin and dihydrostreptomycin in one injection, dosage of each form is halved and risk of neurotoxicity from either antibiotic is thus reduced.

Packs

'Single dose' vials containing 500,000 units sodium penicillin G, 0.25 gram streptomycin sulphate and 0.25 gram dihydrostreptomycin sulphate.

I'm finding it particularly effective in resistant infections too

for symptomatic relief of

Benazma

(Linctus anti-asthmatic, Bencard)

Benazma is a pleasantly aromatic linctus for the symptomatic relief of asthma. It contains pseudo-ephedrine, an alkaloid that relaxes bronchial muscle in the same way as ephedrine but with a minimum of vasopressor activity and other side-effects. The formula, presented in a syrup base, includes stramonium to help maintain normal cardiac function, and codeine to minimise undue nervous stimulation and to depress the cough centre.

Composition

Each dose of
2 fluid drachms
represents:

Pseudo-ephedrine
hydrochloride gr. 1
Ext. Stramon Liq. B.P.
m. 1½
Syr. Pruni Serot. B.P.
fl.dr. 1
Syr. Codeinae Phosph.
B.P.C. fl.dr. 1

Handy treatment for Asthma

Norisodrine Powder by Inhalation

NOW, AT HOME, work or play, when a patient feels an attack of asthma impending, he simply takes 3 or 4 inhalations of the quick-acting broncho-dilator, Norisodrine. Usual result: quick end of bronchospasm. Treatment is inconspicuous, for Norisodrine powder is supplied in sifter cartridges for use in the Aerohalor. No injections, no cumbersome equipment, no need to leave the job. The therapy is easily carried in pocket or handbag. Quick-acting Norisodrine is a more effective bronchodilator than adrenaline, to which it is chemically related. It has relatively low toxicity, and with proper administration side-effects are few and usually minor. However, Norisodrine is a potent drug, please send for a copy of the comprehensive literature which describes administration, dosage and precautions.

NORISODRINE powder 10% and 25% is supplied in multiple-dose Aerohalor Cartridges, packed three to an air-tight vial, four vials to a box.

ABBOTT LABORATORIES LTD. PERIVALE GREENFORD MIDDLESEX

STANDARD X-RAY FILM

in conjunction with ILFORD Standard Tungstate intensifying screens, is an ideal combination for chest radiography in all cases where the available power permits sufficiently brief exposure times. With a kilovoltage appropriate to the subject, its gradation is such that lung detail is well defined in all regions and, if exposure is reasonably correct, scatter effects are practically negligible.

ILFORD X-ray films

RED SEAL X-RAY FILM

is more than twice as fast as ILFORD Standard X-ray film and its use is recommended when exposures would otherwise be longer than 0.1 second. It is also of particular value when a pathological condition presents an unusually long range of subject opacities, or when it is desired to limit the X-ray dosage in an extensive examination. Many workers prefer Red Seal film for all thoracic radiography, since they consider that the many advantages offered by its phenomenal speed are well worth the little extra care necessitated by its use.

ILFORD LIMITED · ILFORD · LONDON

SWEET'S THORACIC SURGERY

By RICHARD H. SWEET, M.D., Associate Clinical Professor of Surgery, Harvard Medical School. *New Second Edition.* 381 pages with 159 illustrations. Price in U.K. and Eire **50s.**, elsewhere **70s.**

More than 100 procedures (including operations on the heart and great vessels) are described—all from the point of view of application of the principles of general surgery to the special conditions found within the thorax. This makes the material of equal value to the general surgeon, resident, and chest surgeon.

Chapter headings are as follows:

Surgical Anatomy of the Thorax.
General Technical Considerations.
Thoracic Incisions.
Operations on the Thoracic Wall.
Operations Concerning the Pleural Cavity.

Operations on the Lung.
Operations Within the Mediastinum.
Operations on the Esophagus.
Abdominal Operations Performed through Thoracic Incisions.
Surgery of the Diaphragm.

272 pages, including many tables and charts, and 32 pages of radiographs.

Based on experience of over one thousand children treated and followed up for an average period of over six years. A special investigation into the deaths from tuberculosis of one hundred unselected cases in London children in recent years is also included. The various manifestations of the disease in childhood are considered from aspects of incidence, diagnosis, prognosis and treatment.

“ANY QUESTIONS?”

SECOND SERIES

For many years past a number of experts have each week constituted a Brains Trust for answering questions sent to the *British Medical Journal* from all over the world. Selections of the more important questions and answers have been published in a handy pocket sized book. In this useful reference book answers have been given to hundreds of common problems that are daily arising in general practice and to which practical and comprehensive advice is required at a moment's notice.

“Any Questions?” Second Series, is a current guide to the practice of Medicine and many of the authoritative answers given have yet to be published in textbooks.

Price 8/-, including postage.

REFRESHER COURSE

FOR

GENERAL PRACTITIONERS

The first collection of Refresher Course articles that have been printed in the *British Medical Journal* is now available in book form. There are fifty-five chapters and each one has been revised and brought up to date by its author. This book is invaluable not only to the General Practitioner but also to Specialists who wish to keep themselves informed on advances in fields of Medicine other than their own.

The volume has 512 pages including a most comprehensive index and is strongly bound in red cloth, medium octavo in size.

Price 25/-, including postage.

Please send remittances to:

Bloodless revolution

The introduction of 'Dextraven' has made available for the first time a dextran solution with controlled optimal molecular content which has been referred to as "narrow fraction dextran." It produces rapid elevation and prolonged maintenance of blood volume and normally ensures that over 50% of the dextran administered remains in the circulation after 24 hours—a longer period than has been possible with any previous blood volume restorer. 'Dextraven' is the preparation of choice for the restoration of blood volume. The British Encyclopaedia of Medical Practice (Medical Progress, 1952) states—"There is little doubt that the narrow fraction dextran will revolutionise supportive therapy and may be regarded as one of the major advances of the year."—Truly a bloodless revolution.
