# Ensuring adequate cough sedation

ETHNINE is a new, palatable, and effective cough sedative containing 4 mg. Pholcodine in each teaspoonful.

The properties of Pholcodine are:—

Less toxic than Codeine.

Higher anti-tussive factor than Codeine.

Less constipating than Morphine or Codeine.

The sedative action of ETHNINE is particularly useful in the treatment of the elderly patient who may suffer from insomnia or exhaustion as a result of intractable nocturnal cough.

## ETHNINE

## NORISODRINE

No need for the chronic asthmatic to give up work, play or a normal life. With Norisodrine, a quick-acting bronchodilating powder, symptomatic relief is as near as the patient's pocket or purse. When the asthmatic feels an attack coming on, he simply takes three or four inhalations of the powder, using the pocket-sized AEROHALOR. Result? The broncho-spasm usually ends quickly. No injection, or cumbersome equipment, no need to leave the job.

Norisodrine is effective against both mild and severe asthma.<sup>1, 2, 3</sup> It has relatively low toxicity, and

with proper administration side-effects are few and usually minor. Before prescribing Norisodrine, however, the physician should familiarize himself with administration, dosage and precautions which are described in comprehensive literature available to the medical profession. May we send you a copy?

## **'STREPTAQUAINE'** brand **SOLUTION**

*stabilised injection of  
streptomycin sulphate*

'Streptaquaine' Solution presents streptomycin sulphate in a ready-prepared stabilised aqueous solution, intended for intramuscular injection without further dilution. The clinical applications of 'Streptaquaine' Solution are, of course, those of streptomycin sulphate but it is more convenient in use.

'Streptaquaine' Solution will remain stable for 12 months at temperatures below 20°C.

## X-RAY FILMS

*of individual character*

Each of the three Ilford X-ray films possesses special characteristics of its own which ensure outstanding performance in particular fields of application. When considered together, however, these films not only cover the whole range of radiographic requirements but reveal one very important characteristic in common — the high and consistent quality for which Ilford sensitised materials are famous the world over.

### STANDARD

A general-purpose medical film, giving excellent contrast and very low fog with salt intensifying screens, but suitable also for use without screens.

### RED SEAL

A screen-type medical film of very high speed, invaluable for heavy subjects and for all cases where very brief exposures are necessary.

### ILFEX

An extremely fast, non-screen film for use when the highest definition is essential, as in radiography of the limbs and the investigation of bone detail.

# UNIVERSAL PLANIGRAPH

The unique stand for layer radiography of patients in a vertical, recumbent or oblique position.

This design of a universal apparatus for layer radiography incorporates outstanding features which render it suitable for diagnosis in chest radiography and also for all other examinations where layer radiography is indicated.

The depth of the layer radiograph to be taken can be predetermined by fluoroscopy, resulting in considerable saving of film material.

for symptomatic relief of

## Benazma

(Linctus anti-asthmatic, Bencard)

Benazma is a pleasantly aromatic linctus for the symptomatic relief of asthma. It contains pseudo-ephedrine, an alkaloid that relaxes bronchial muscle in the same way as ephedrine but with a minimum of vasopressor activity and other side-effects. The formula, presented in a syrup base, includes stramonium as an antispasmodic and codeine to minimise undue central nervous stimulation.

*Bottles of 8, 20 and 80 fluid ounces.*

### Composition

*Each dose of  
2 fluid drachms  
represents :*

Pseudo-ephedrine  
hydrochloride gr. 1  
Ext. Stramon Liq. B.P.  
m. 1½

# *Bloodless revolution*

The introduction of 'Dextraven' has made available for the first time a dextran solution with controlled optimal molecular content which has been referred to as "narrow fraction dextran." It produces rapid elevation and prolonged maintenance of blood volume and normally ensures that over 50% of the dextran administered remains in the circulation after 24 hours—a longer period than has been possible with any previous blood volume restorer. 'Dextraven' is the preparation of choice for the restoration of blood volume. The British Encyclopaedia of Medical Practice (Medical Progress, 1952) states—"There is little doubt that the narrow fraction dextran will revolutionise supportive therapy and may be regarded as one of the major advances of the year."—Truly a bloodless revolution.
