**Fig S1.** Immunohistochemical results showed positive for CD 31 (A) and pan-cytokeratin (B), partially positive for S-100 (C), and a low calretinin positivity of 1% to 2% (D), and negative for cytokeratin 5/6 (E). (Original magnification, × 100.)
**Fig S2.** Cardiac ultrasound revealed a large mass in the right atrium extending past the tricuspid valve into the right ventricle and was beating with the blood flow, this was never observed in any previous cardiac ultrasound examinations.
Figure S3. Angiography of abnormal left and right co-trunk bronchial artery.
Figure S4. Angiography of the right abnormal co-trunk bronchial and intercostal arteries.
**Fig S5.** Pathology confirmed the diagnosis of atrial myxoma.
Figure S6. The timeline between the echo, CT, angiography at baseline, and follow-up. Abbreviations: CTPA, Pulmonary artery computed tomographic angiography; BAE, Bronchial artery embolization.
